

FOR ANKARSRUM

Where your US customers come from. And *where they go* *next.*

A map of how American shoppers move through your site. The USA is one of your two new starter markets, alongside the UK.

THE BIG IDEA

Direct traffic powers your
US business. *Refurbished*
is the hidden engine.

SESSIONS (12 MONTHS)

793k

PURCHASES

8,613

REVENUE

\$4.5m

TWO MARKET TYPES, TWO DIFFERENT JOURNEYS

The USA is a *new starter* market.
It does not yet behave like a *mature* one.

NEW STARTER MARKETS · YOU ARE HERE

USA, United Kingdom

- **Awareness is still being built.** Paid Search and PMax carry significant load because the brand has not saturated yet.
- **Customers compare and verify.** They look at reviews, alternatives, refurbished, sale options. Price is part of the decision.
- **Aesthetic choice matters.** Six US colour variants each pulled 8k to 19k sessions. The mixer is a visual purchase.
- **Price-sensitive sub-segments thrive.** Refurbished and "ankarsrum mixer sale costco" searches show a parallel audience.
- **USA is the larger new starter, the UK is the smaller.** The US funnel works at scale. The UK is still mostly in awareness phase.

MATURE MARKETS · FOR CONTRAST

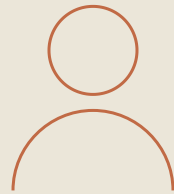

Sweden, Germany

- **Brand awareness is established.** Direct visits and brand-name searches dominate the traffic mix.
- **Customers arrive with intent.** The mixer purchase is the goal of the visit, not an exploration.
- **Content engages but doesn't always close.** Recipe pages drive brand value across many years of return visits.
- **Conversion happens deep in the funnel.** Home page and category page do most of the closing.
- **Email and direct visits over-convert.** The customer relationship is already established.

The recommendations in this deck assume USA's new starter behaviour. The mixer is being discovered, not just bought.

A PORTRAIT DRAWN FROM THE DATA

They already know who you are. They come back to choose.

The Brand Buyer

PRIMARY VISITOR TYPE

01

THEY TYPE YOUR NAME INTO GOOGLE

Of the 25 highest-volume organic queries, 22 contain "ankarsrum". The top non-brand search is "stand mixer", and it produces only 727 clicks. Brand awareness is the engine.

02

THEY COME BACK DIRECTLY

337,743 sessions arrive without a referrer. That is 43 percent of all traffic. Most of these are repeat visitors who already know your URL.

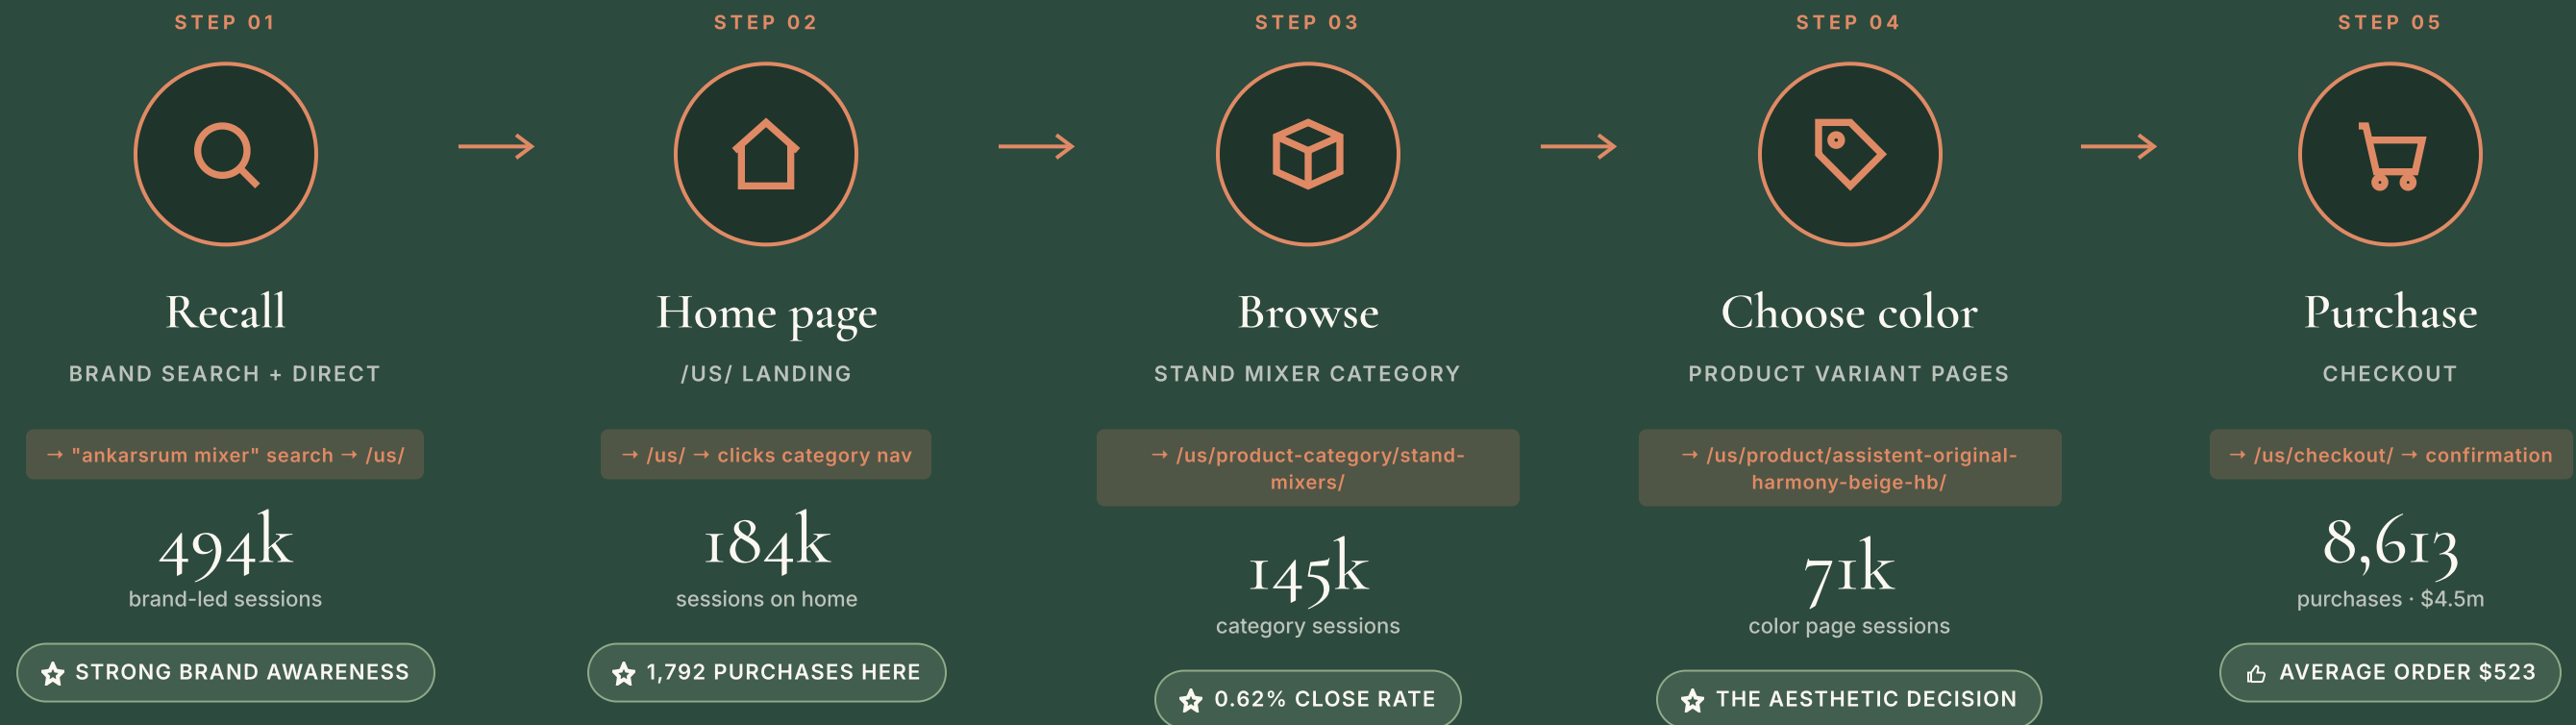

03

THEY SHOP ON COLOR

Five separate product pages for color variants (Harmony Beige, Cloudy Pink, Sunbeam Yellow, Red, Forest Green) each pull thousands of sessions. The mixer is also a kitchen object.

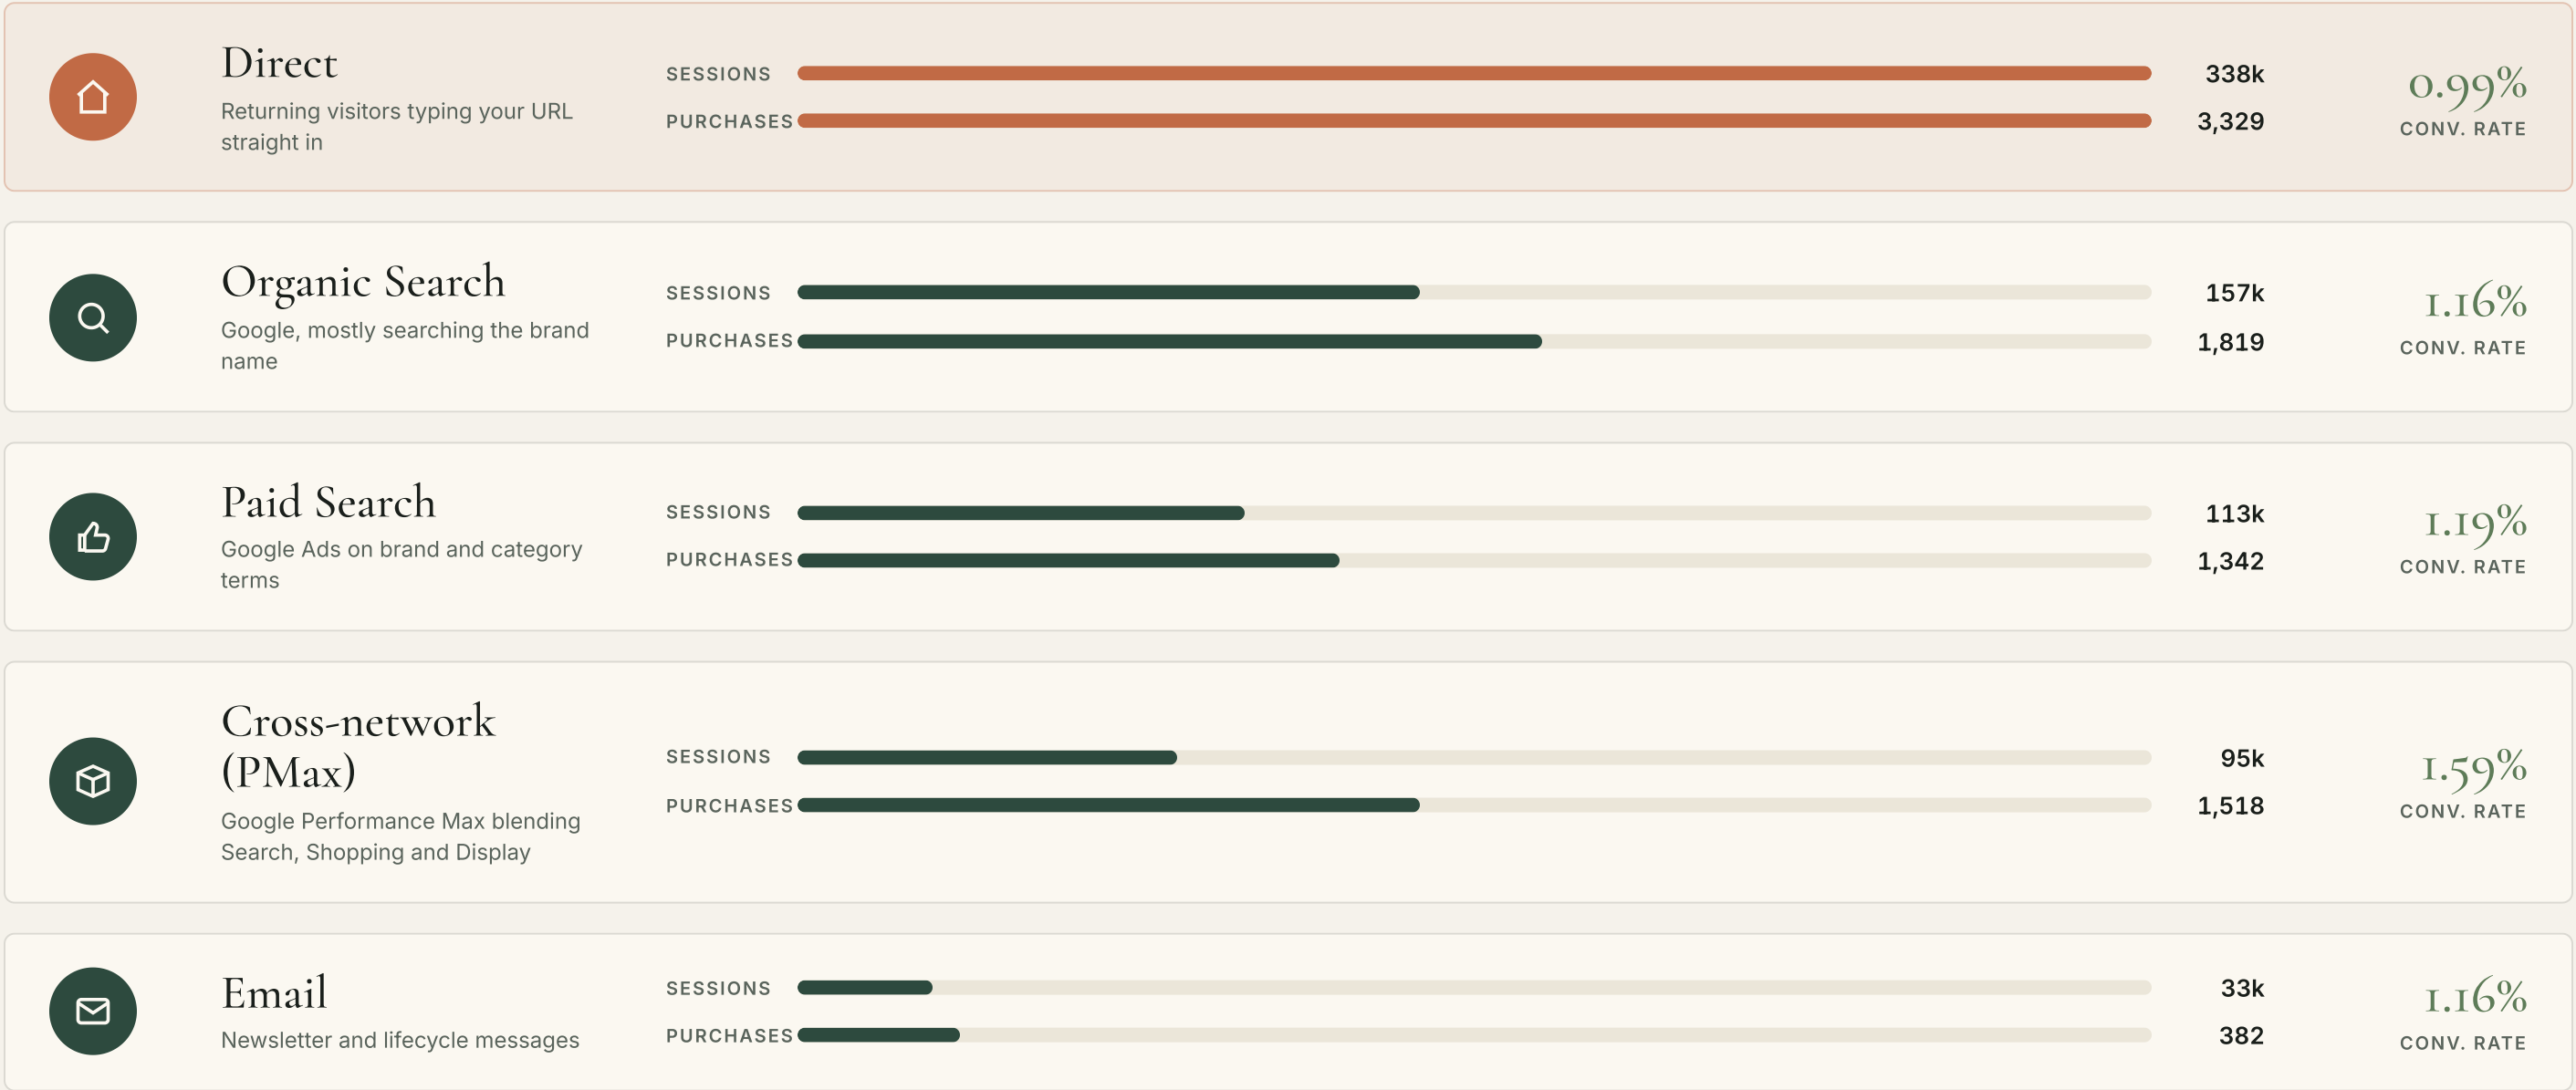

FROM BRAND RECALL TO CHECKOUT

How a typical US customer reaches you.

THE FIVE CHANNELS THAT MATTER

Direct dominates. Email and PMax close hard.

A SEGMENT IN PLAIN SIGHT

People search for "refurbished". Nobody is talking to them.

4,112

Google clicks per year

on refurbished, used, sale and Costco search terms combined

28,234

Refurbished category sessions

in twelve months, /us/product-category/refurbished-ankarsrum/

170

Purchases from refurbished

at a 0.60% conversion rate on a price-sensitive audience

55%

Click-through rate

on "ankarsrum refurbished" in Google. People are searching with intent.

These are real searches, today.

" *ankarsrum refurbished*

" *ankarsrum mixer sale costco*

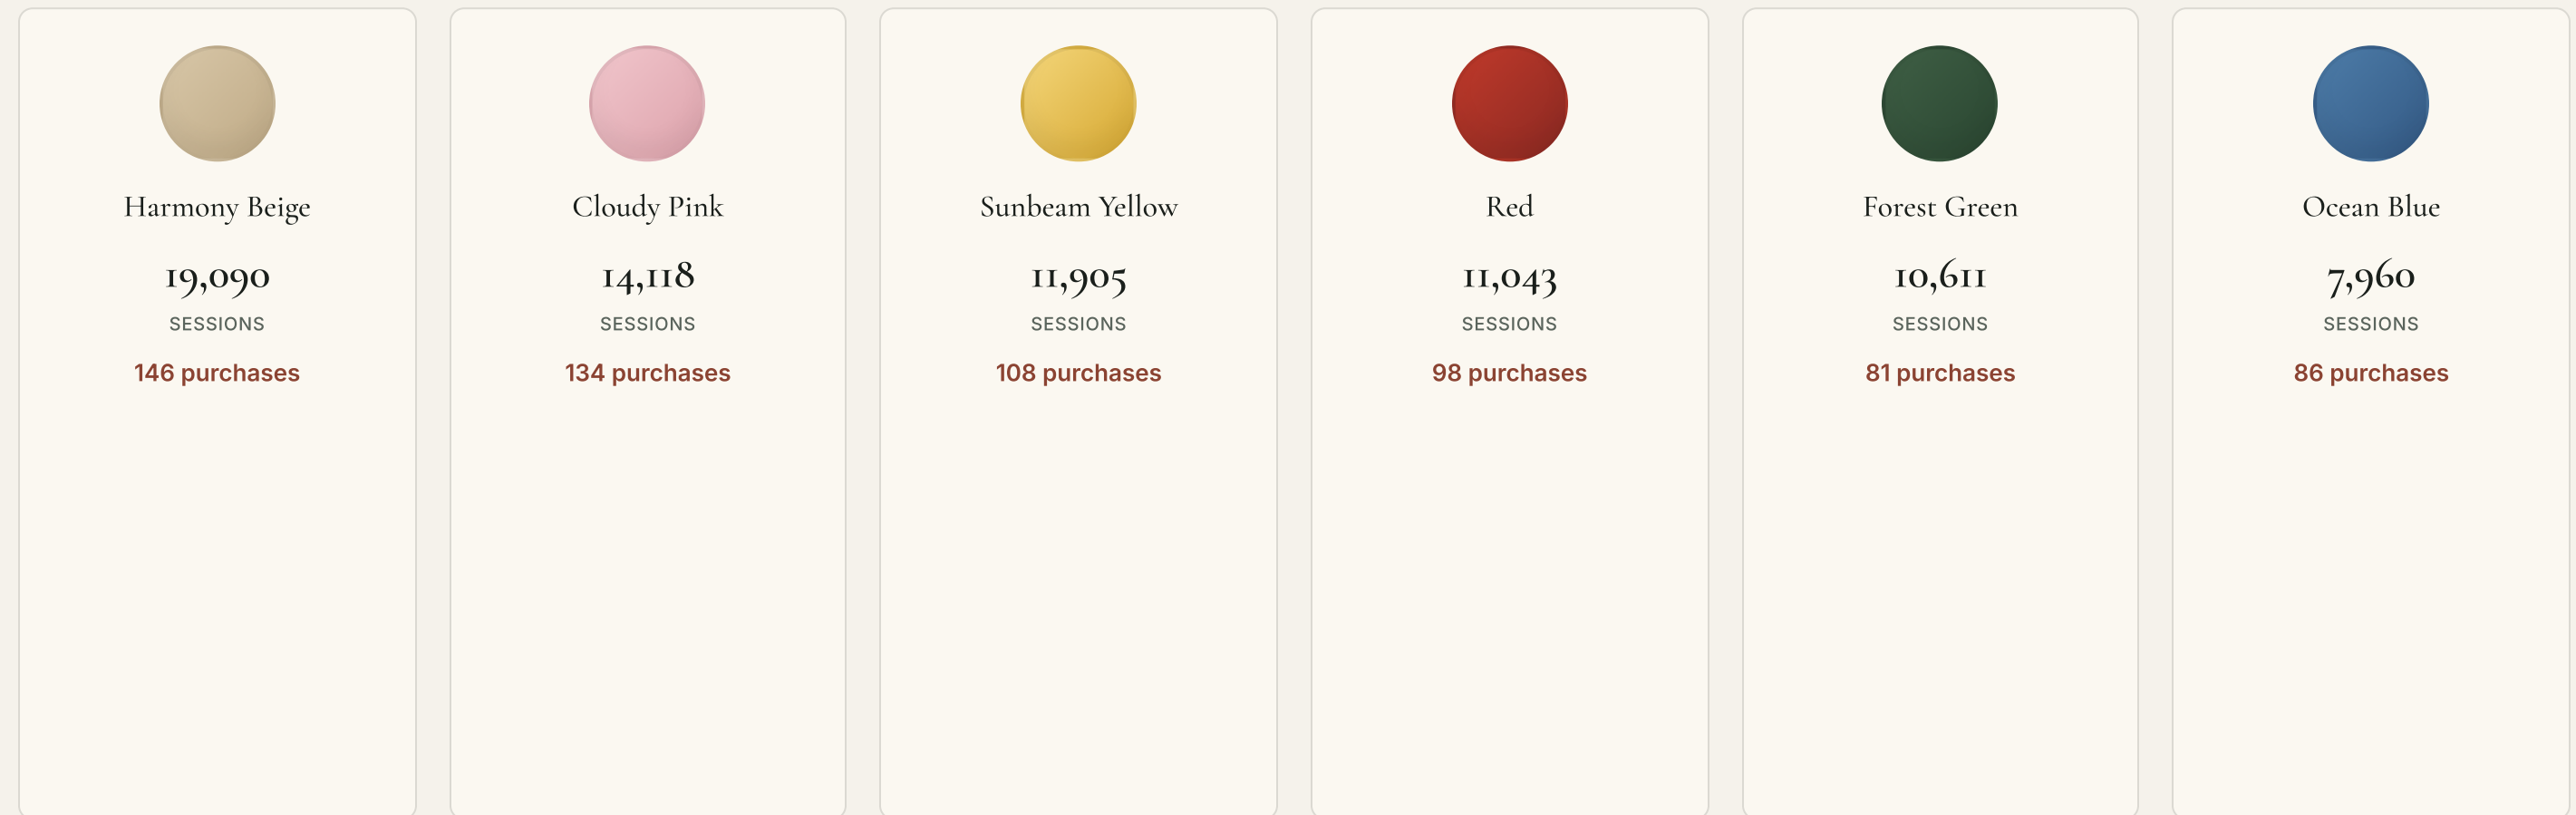

" *refurbished ankarsrum mixer*

" *used ankarsrum mixer*

A price-conscious segment is already searching for your brand. The refurbished category absorbs some of them but there is no dedicated funnel, no email flow, no separate paid campaign. This is a segment hiding in plain sight.

A PATTERN IN THE PRODUCT PAGES

Each color is its own destination.

Six color variants together pulled 74,727 sessions and produced 653 purchases over twelve months. The mixer is being chosen as much for its colour as for its function. Colour-led merchandising and seasonal launches are a real lever in the US.

TWO MEASUREMENT SYSTEMS, TWO DIFFERENT STORIES

Meta says it works. Your site says it doesn't.

WHAT META REPORTS

From the ad platform

621

PURCHASES ATTRIBUTED

34.3X

RETURN ON AD SPEND

\$3.71m

REVENUE ATTRIBUTED BY META

Meta's own reporting uses click and view through windows that credit the platform for assisted journeys. By Meta's accounting, the US Meta account is one of your strongest channels.

WHAT YOUR SITE SEES

From Google Analytics

38

PURCHASES ATTRIBUTED

0.12%

CONVERSION RATE

30,843

SESSIONS ARRIVING FROM PAID SOCIAL

Analytics uses last non-direct, which credits the channel that touched the customer last. By that measure Paid Social produces almost nothing of the on-site purchases.

Both numbers are real. They measure different things. Meta sees the assisted contribution across days. GA4 sees the on-site close in one session. A 34x ROAS is not noise. The action is to verify Meta's attribution against actual Woo orders and to improve the landing experience for Meta visitors, not to pull budget.

FOUR ACTIONS, ORDERED BY IMPACT

Concrete moves the data supports.

1

Build a dedicated refurbished funnel

Treat refurbished as its own product line, not a sale page. Separate landing page, dedicated paid search campaign on "refurbished" and "used" terms, a Costco-comparison page that owns the search "ankarsrum mixer sale costco" (859 clicks a year already going there). Email flow for price-sensitive subscribers.

MEDIUM EFFORT · HIDDEN UPSIDE

2

Lean into colour-led merchandising

Six color variants already produced 653 purchases and 74,727 sessions. Make this explicit. Seasonal color launches, color-quiz on the home page, lifestyle photography per color, email segmentation by colour preference. The mixer is a kitchen object as much as a tool.

LOW EFFORT · REUSES EXISTING ENGINE

3

Read Paid Social with both lenses

Meta reports ROAS 34x, your highest-return channel by its own measurement. GA4 sees only 38 purchases because Meta visitors rarely close on the same session. Don't pull budget. Verify Meta's attribution against actual Woo orders. Investigate the on-site experience for Meta-arriving visitors so more close on the first visit. Brand search volume and direct traffic are useful supporting evidence 2 to 4 weeks after Meta flights.

VERIFY AND IMPROVE

4

Protect what works, scale carefully

Direct, Organic Search, Paid Search, PMax and Email all convert above 1 percent. Together they produced 7,070 purchases on twelve months. Do not break the engine. Scale PMax budget and email volume incrementally and measure marginal return.

MAINTAIN · STRATEGIC

BUILDING ON THESE FINDINGS

What we recommend tackling next.

- O1** Three US personas, drawn from the data
The Brand Buyer (direct and brand search), the Refurbished Hunter (price-led, searching used and sale), and the Color Picker (browsing product variants). The data exists, it needs structuring and shared language for marketing decisions.
- O2** Refurbished funnel pilot
Dedicated landing, separate paid campaign, separate email cohort. Measure incremental purchases attributable to the refurbished line over 90 days against the current baseline of 170 purchases per year.
- O3** Color-led campaign and CRO test
A/B test a color-first home page or category page. Add a "find your color" path. Measure click-through to product variant pages and the share of purchases that come from variant pages versus the generic stand-mixer page.
- O4** Brand-lift measurement for Paid Social
Set up a proper measurement framework. Track branded search volume and direct traffic before, during and after Meta campaign flights. Replace the GA4 last-non-direct view with a multi-source attribution model for awareness channels.

FOR THE ANALYTICALLY CURIOUS

The full channel breakdown.

CHANNEL	SESSIONS	% OF SESSIONS	PURCHASES	% OF PURCHASES	CONVERSION RATE	REVENUE (USD)
Direct	337,743	42.6%	3,329	38.7%	0.99%	\$1,774,448

TRANSPARENCY ABOUT THE DATA

Where the numbers come from.

DATA SOURCES

- **Google Analytics 4**
Sessions, channels, landing pages, ecommerce events for ankarsrum.com/us/
- **Google Search Console**
Organic search queries and ranking positions
- **Meta Ads**
Spend, reach, conversions for the Ankarsrum US account, via Windsor
- **WooCommerce**
Transaction-level data via GA4 ecommerce events

WHAT TO KNOW ABOUT THE NUMBERS

- The measurement period covers 15 May 2025 to 14 May 2026, one full season including holiday peaks.
- Conversion values report subtotal excluding sales tax and shipping. Net, not gross.
- GA4 uses last non-direct attribution. Meta and Google Ads use their own internal models, which produce different totals for the same purchases.
- The US Meta account is billed centrally in SEK. The 34x ROAS figure refers to revenue attributed by Meta against spend, in the platform's own reporting.

THANK YOU

The US map is drawn.
Now we can *move the pins.*

A snapshot of your American customers, drawn from twelve months of real behaviour.
